mental health

Mental health
promotion action

Health in All Policies (HiAP)

- *Health in All Policies* is an approach to public policies across sectors that systematically takes into account the health implications of decisions and seeks synergies, in order to improve population health and health equity
- It provides a framework for regulation and practical tools that combine health, social and equity goals with economic development, and manage conflicts of interest transparently. These can support relationships with all sectors, including the private sector, to contribute positively to public health outcomes.

Towards implementation

Building on the work of the Joint Action on Mental Health and Wellbeing, the EU-Compass for Action on Mental Health and wellbeing is contracted by DG SANTE 2015-2018 to disseminate Joint Action outcomes, monitor progress and exchange good practices.

- Exchange of good MHiAP practices (EU Compass)
- MHiAP workshops in Member States
- Monitoring of progress (annual Governmental MH Expert Survey)
